For the 6 times table, it is difficult to find a useful mnemonic. The advantage of the 6 times table is that you won't start learning it until you master many of the other tables. In other words, you'll already be familiar with many of the sums. For instance, $6 \times 1 = 6$, $6 \times 2 = 12$, $6 \times 3 = 18$, $6 \times 4 = 24$, $6 \times 5 = 30$, $6 \times 10 = 60$.

If the digit was 3, for example, the nines

Read PDF 60

Multiplication

complement of 3 is 6.

For the last digit

(ones), the student would use the tens

complement. For

example, a typical

question is $1000 - 456$.

The nines complement

of 4 is 5, the nines

complement of 5 is 4

and the tens

complement of 6 is 4.

Putting it all together,

the student would get

5 4 4 or $544 = 1000 \dots$

Subtraction
