Heliciculture, commonly known as snail farming, is the process of raising edible land snails, primarily for human consumption or cosmetic use. The meat and snail eggs can be consumed as escargot and as a type of caviar respectively. Mucus, commonly known as snail slime, has medical properties and is used in cosmetics.. Perhaps the best known edible land snail species in the Western world is the ...

Heliciculture - Wikipedia

When nerites are commercially reproduced they will not grow barnacles. The largest specimens of the Nerita reclinata species of algae eating snail are less than an inch across. Olive nerite snails are probably about the best algae eating snail for aquariums in the world as they DO NOT reproduce in freshwater but only in brackish or saltwater.

Exotic Freshwater Snails For Sale - Arizona Aquatic Gardens

Slugs and Snails. Slugs and snails can become greenhouse pests when the humidity is high. Slugs are fleshy, slimy animals that feed mainly at night. They prefer cool, moist hiding places during the day. Slugs rasp on leaves, stems, flowers and roots. They produce holes in the leaves or just scar the leaf surface.

Greenhouse Insect Management | Entomology

Many commercially valuable species of fish and shellfish use wetlands as spawning or nursery areas. Thousands of aquatic species—including worms, snails, insects, mussels, tiny crustaceans and reptiles and amphibians—thrive in wetlands. In turn, larger animals depend on these small aquatic species for food. Economic and aesthetic value

Wetlands | Chesapeake Bay Program

Abalone vary in size from 20 mm (0.8 in) (Haliotis pulcherrima) to 200 mm (8 in) while Haliotis rufescens is the largest of the genus at 12 in (30 cm). The shell of abalones is convex, rounded to oval in shape, and may be highly arched or very flattened. The shell of the majority of species has a small, flat spire and two to three whorls. The last whorl, known as the body whorl, is auriform ...

Abalone - Wikipedia

Invasive species have a long history of causing damage to forests in Asia and the Pacific, and a variety of infestations are currently having significant impacts in a number of countries. The damage caused by invasive species imposes enormous costs on the forests of the region in terms of ecological destruction, economic losses and detrimental social effects.

The unwelcome guests. Proceedings of the Asia-Pacific ...

The greatest problem we have on the Nursery comes with young plants which seem to be very attractive to slugs and snails. It is wise to provide some slug bait or a slug trap nearby, although vines grown on sunny walls tend to escape this type of damage because the conditions are unsuitable for our slimy enemies.
