Corso Di Idraulica Ed Idrologia

Milano poggia su un'unica tipologia di terreno di origine fluvio-glaciale a cemento carbonatico, comune a tutta la pianura padana. La caratteristica principale è quella di essere facilmente carsificabile. Tale roccia è ricoperta dai sedimenti fluviali quaternari ed è visibile lungo i principali corsi d'acqua, costituendo dei conglomerati che in Lombardia sono conosciuti come "ceppi".
