Webmin is a web-based interface for system administration for Unix. Using any modern web browser, you can setup user accounts, Apache, DNS, file sharing and much more. Webmin removes the need to manually edit Unix configuration files like /etc/passwd , and lets you manage a system from the console or remotely.

### **Webmin**

Using any modern web browser, it enables management of user accounts, Apache, DNS, file sharing and much more. The steps below walk you through the process of installing and configuring Webmin on a Bitnami virtual machine or server: Log in at the machine console. Download the latest stable version of Webmin. Note that X.Y are placeholders for the Webmin version number in the commands shown below.
