There's an engine misfire and a compression of 30 in the cylinder on my 2002 Land Rover Discovery. I've taken off the valve cover and see nothing wrong with the springs or rods. I just rewired my '56 Chevy truck with an American autowire harness. The engine cranks but won't fire. I need an electrical professional.

A car or truck engine is made up of numerous moving components that eventually cause friction. This friction begets heat, and this is why motor oil is pumped through engine parts to provide lubrication. Moving machineries overheat as a result of continuous operation, so the motor oil has to be supplemented by the radiator for better cooling.
