The 1.6-liter Hyundai G4CR is an in-line four, dual overhead camshaft (DOHC) engine manufactured from 1990 to 1995 under license, as it was in fact a copy of the Mitsubishi 4G61 engine, and it was put on the first generation of the Lantra model. Unlike other power units of this series, this one never had a balancing shaft.

### Hyundai Sirius engine - Wikipedia

Engines continued to spin the same clockwise direction as the old motors, but head flow was reversed in order to keep the exhaust at the front of the cars. In addition to the EvoIV-IX, this engine was found in Sonatas, Galants, Outlanders, and some others. The 4G6x is now being phased out to be replaced by the 4B1x engine.

The stamp on the engine block says it's a 4g61, however, we swapped out parts from a 4g63 (Eagle Talon ES) and put it on the engine we pulled from the Summit. We changed parts such as mounts, alternator, the cam positioning sensor, AC, etc. Should I look into replacing the ECU with an ECU for the correct engine model? Jan 21, 2005 #4

ACL Race Main Bearings Mitsubishi 4G61, 4G62 Designed to withstand high RPM, temperatures and load, these high strength bearings are manufactured by ACL from 3 layers of hardened steel, copper and nickel. This "trimetal" composition substantially lowers friction, and thus reduces the operating temperatures while providing superior lubrication.

1 = Engine Model (Doesn't equate to capacity, as a higher number can belong to a lesser cc'd engine.) T = Turbo (This is more of an adopted addition to the engine codes, rather than an official part of it. The official way Mitsubishi will list the motor is "4G61 Turbo".) Example: 6A13TT (2.5L V6 twin-turbo motor in the Galant/Legnum VR-4)
