Ratios and rates | Pre-algebra | Math | Khan Academy
Ratios, rates, and percentages are some of the most useful math concepts in real life (and what is REAL life anyway, huh?). From baking recipes to sports, these concepts wiggle their way into our lives on a daily basis.

Ratios, rates, & percentages | 6th grade | Math | Khan Academy
The following ratios are all equivalent ratios to each other. $3/5 = 6/10 = 9/15 = 30/50 = 0.3$ $0.5 = 90/150$ You can continue this way any number of times to get an infinite number of equivalent ratios.

CEMC's Open Courseware - Grades 7 & 8 Mathematics
Students apply reasoning when solving collections of ratio problems in real world contexts using various tools (e.g., tape diagrams, double number line diagrams, tables, equations and graphs). Students bridge their understanding of ratios to the value of a ratio, and then to rate and unit rate, discovering that a percent of a quantity is a rate ...

Standard: Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks 1/2 mile in each 1/4 hour, compute the unit rate as the complex fraction (1/2)/(1/4) miles per hour, equivalently 2 miles per hour.

UNIT 3: Ratios & Proportional Relationships
The person-time rate presented in Question 8 should be reported as 5 cases per 250 person-years. Usually person-time rates are expressed per 1,000 or 10,000 or 100,000, depending on the rarity of the disease, so the rate in Question 8 could be expressed as 2 cases per 100 person-years of follow-up.

When mortality rates are based on vital statistics (e.g., counts of death certificates), the denominator most commonly used is the size of the population at the middle of the time period. In the United States, values of 1,000 and 100,000 are both used for 10 n for most types of mortality rates.
