We work cooperatively with the New England and Mid-Atlantic Fishery Management Councils, and the Atlantic States Marine Fisheries Commission to develop, review, and implement fishery management plans in federal waters (from 3 to 200 nautical miles). Our research and research surveys provide the necessary information needed to evaluate the overall health of more than 50 fisheries with 14 ...

New England/Mid-Atlantic | NOAA Fisheries

Human activities affect marine life and marine habitats through overfishing, habitat loss, the introduction of invasive species, ocean pollution, ocean acidification and ocean warming. These impact marine ecosystems and food webs and may result in consequences as yet unrecognised for the biodiversity and continuation of marine life forms.. According to the IPCC (2019), since 1950

Cheung et al. quantify the cumulative ecological disruption of coral bleaching to the Great Barrier Reef. They also reveal predictable thermal stress patterns that allow managers to target interventions specifically to facilitate ecosystem resilience and coral adaptation to a warming climate.

Cumulative bleaching undermines systemic resilience of the ...

Dewaele et al. show that Miocene whales, dolphins, and seals from the ancient Paratethys Sea independently evolved highly compact bones. The latter may have been an adaptation to hypersaline conditions created 13.8–13.4 million years ago, when the Paratethys—and the marine mammals within it—effectively became isolated from the world ocean.
