The best option for spine patients is minimally invasive spine surgery (MISS). These procedures can be performed with more precision than laser surgery. As with laser surgery, MISS is done through a small incision. Muscles are not cut; instead, the muscle fibers are moved slowly from the surgical area with specialized equipment.

Surgery (MIGS) in Oklahoma | DMEI

A laser is used to make the necessary cuts rather than the scalpel used in more traditional surgery. However, laser spine surgery does not mean that the procedure will be incision-free; an incision is needed to insert the laser into the appropriate area. The laser is then used to remove any soft tissues that
