Offshore oil production involves environmental risks, most notably oil spills from oil tankers or pipelines transporting oil from the platform to onshore facilities, and from leaks and accidents on the platform. Produced water is also generated, which is water brought to the surface along with the oil and gas; it is usually highly saline and may include dissolved or unseparated hydrocarbons.

## **Offshore Oil & Gas**

Onshore oil production requires the drilling of deep holes down into the earth's surface to reach the oil below, much like offshore drilling but without the difficulty of deep water between the platform and the oil. Since the ground offers a solid base, the drilling structures and storage areas are built directly on the soil.
