Dropping a perpendicular from the point in the plane to the x-axis forms a right triangle, as illustrated in Figure 5. An easy way to remember the equations above is to think of $\cos \theta$ as the adjacent side over the hypotenuse and $\sin \theta$ as the opposite side over the hypotenuse.

However, we can find a more general approach by considering the relation between the two acute angles of a right triangle where one is θ , making the other $\pi/2 - \theta$. Consider the sine and cosine of each angle of the right triangle in Figure 10.

Values described as "from the right" are greater than the input value $\pi/2$ and would therefore appear to the right of the value on a number line. The input values that approach $\pi/2$ from the right in Figure 3 are 7.1, 7.1, 7.01, 7.01, and 7.001. 7.001. The corresponding outputs are 8.1, 8.1, 8.01, 8.01, and 8.001. 8.001. These values are getting ...

Using the Law of Sines to Solve Oblique Triangles. In any triangle, we can draw an altitude, a perpendicular line from one vertex to the opposite side, forming two right triangles. It would be preferable, however, to have methods that we can apply directly to non-right triangles without first having to create right triangles.

You don't even have to use integrals to find the volume, but you can, I guess. I got 16/3 from using triple integrals, and from using a visual approach. Proof based on right-angle triangles. Any similar triangles have the property that if we select the same angle in all of them, the ratio of the two sides defining the angle is the same regardless of which similar triangle is selected, regardless of its actual size: the ratios depend upon the three angles, not the lengths of the sides. Thus for either of the similar right triangles in the ...

Pythagorean trigonometric identity - Wikipedia

Trigonometry (from Greek trigōnon, "triangle" and metron, "measure") is a branch of mathematics that studies relationships between side lengths and angles of triangles. The field emerged in the Hellenistic world during the 3rd century BC from applications of geometry to astronomical studies. The Greeks focused on the calculation of chords, while mathematicians in India created the earliest ...
