Individual genes can be understood as notes, and the music of life originates not by a sequence of one note played at a time. Instead, the genes can express collectively in nearly an infinite variety of ways, and it is the patterns of gene expression which produce a symphony. For example, Noble notes that genes are divided into exons and introns. Life, Noble asserts, is a kind of music, a symphonic interplay between genes, cells, organs, body, and environment. He weaves this musical metaphor throughout this personal and deeply lyrical work, illuminating ideas that might otherwise be daunting to non-scientists.
